

Instructions

1. Run all the code contained in file “mock2017_12.R”.
2. Knit to HTML the file “mock2017_12.Rmd”. Accept if proposed to install packages. (this is done to check that markdown documents are compiled without problems)
3. Solve the mock exam.
4. The solutions should be delivered in the paper form. (the best way to do it is to knit an HTML page using rmarkdown, open that page in the browser and print it using the printer located in the classroom)
